SAFETY INSTRUCTIONS

Various safety devices and methods of guarding have been provided on this machine. It is essential, however, that machine operators and maintenance personnel observe the following safety precautions. Improper installation or operation of this equipment may cause injury to personnel or damage to equipment.

1. Read this manual before attempting to operate your machine. Never allow an untrained person to operate or service this machine.
2. Connect the machine to a properly grounded electrical supply that matches the requirements shown on the electrical specification plate and follow specifications of local electrical codes.
3. Disconnect and lock-out the machine from the power supply before cleaning or servicing.
4. Check and secure all guards before starting the machine.
5. Observe all caution and warning labels affixed to the machine.
6. Use only proper replacement parts.
7. Do not wear loose fitting clothing or loose hair. Shirt tails should be tucked in.
8. Wear proper personal safety equipment.
9. Keep Hands away from the moving parts of this machine while it is in operation.
10. In addition to these general safety instructions, also follow the more specific safety instructions given for the different areas of the machine in the operating instructions.

WARNING

DO NOT USE FOR OTHER THAN ORIGINALLY INTENDED PURPOSE

DESCRIPTION/SPECIFICATION

Description

The Oliver Model 2003 is a variable slice thickness bread slicer which utilizes a new and innovative way to slice bread. The bread is moved past a circular blade which is mounted to a moving arm, cutting each slice individually to whatever thickness is selected. The slicer is designed for on-demand slicing allowing your customers to choose a slice thickness which satisfies their needs.

The slicer employs a disc brake on the blade drive motor which mechanically engages to stop the blade whenever the blade is exposed due to a door being opened, or after the slicing cycle is finished.

Note

This machine is not intended to be used for slicing warm, sticky, nut and/or fruit breads.

Physical specifications

Product Capacities:

The slicer will process loaves up to 9 inches by 4-1/4 inches by 15 inches long.

Overall Machine size:

Width = 36 inches

Height = 28-1/2 inches, 48-1/2 inches with Blade Guard all the way open.

Depth = 24 inches, 36-1/4 inches with Blade Guard all the way open.

Net Weight:

Approximately 360 pounds.

Shipping Weight:

Approximately 375 pounds.

Slice Thickness:

3/8, 7/16, 1/2, 5/8, 3/4, 7/8, 1, and 1-1/2 inches.

Electrics:

3/4 Horse Power, 1 phase, 50/60 hertz, 115 Volts AC, 13 Amps,
(20 Amp Dedicated Circuit).

3/4 Horse Power, 1 phase, 50/60 hertz, 230 Volts AC, 6.5 Amps,
(10 Amp Dedicated Circuit).

REV. 07-29-96

OVERALL MACHINE DIMENSIONS

Rev. 12-15-95

OPERATING INSTRUCTIONS

1. Automatic Diagnostic Check:

Close both doors. Turn the machine on by pushing the power switch to the on position. The machine will automatically perform a diagnostic check on the end and home proximity sensors (PS). You should observe the pusher going to its "home" (left) and "end" (right) limits. The pusher will finish at the home position. You may then begin standard operation.

2. Standard Operation:

- Upon a successful completion of the diagnostic check, the machine is ready for slicing.
- Hold open the left door with left hand.
- Place loaf on table.
- Slide loaf left onto the pins on the pusher so that pins penetrate the loaf, until it is firmly against the back of the pusher.
- Close door'(s).

Note

Machine will not operate if either door is open.

- Select the appropriate thickness setting.
- Press **START** in the **PUSHER CONTROL** area of the panel.
- Wait for bread to be sliced. After the final slice, the bread will be in the right hand compartment.
- Open the right hand door and remove the loaf.
- Replace the heel holder on the table. Move it as far to the left as the cable assembly will allow. Close the door.
- Repeat above steps for each loaf.

Rev. 12-15-95

3. Stopping:

If a slice gets jammed, press **STOP**, (in the **PUSHER CONTROL** area), to stop slicing, turn power off, disconnect and lock-out machine before trying to clear the machine.

Pressing **STOP** twice will stop slicing and return the pusher to the home position.

CAUTION

Do not open doors while slicer is operating. Doing so will cause slicing to stop.

MAINTENANCE

WARNING

DISCONNECT AND LOCK OUT THE MACHINE FROM THE POWER SUPPLY BEFORE CLEANING OR SERVICING. REMEMBER TO USE CARE WHENEVER YOU ARE WORKING NEAR THE BLADE.

1. Cleaning:

Use a mild detergent solution applied with a cloth or spray cleaner on all exterior and interior surfaces as necessary. Remove and empty contents of the crumb tray daily. Periodically remove the blade and clean the blade compartment.

The blade must be cleaned each day, you Do Not need to remove the blade for this. Use a mild detergent solution or spray cleaner. For harder deposits use a non scratch cleaning pad similar to Scotch-brite (tm).

2. Lubrication:

all motors and bearings are pre-lubricated and sealed, lubrication in not required. Do Not attempt to oil or grease the motor.

3. Changing a blade:

WARNING

DISCONNECT AND LOCK OUT THE MACHINE FROM THE POWER SUPPLY BEFORE CLEANING OR SERVICING. REMEMBER TO USE CARE WHENEVER YOU ARE WORKING NEAR THE BLADE.

- Lift the blade guard after removing the knob, (located at the bottom front edge of the guard), which holds it in place. Gently lift the hinged blade guard, resting it all the way open. Use the flip-out prop to hold it in that position.
- Remove the blade mounting screw using a 1/2 inch wrench.
- Remove the lockwasher, special washer, 2 inch diameter collar, and the circular knife.
- The blade is replaced by reversing the above procedure.
- When reinstalling the blade, make sure the beveled side faces the outfeed (FLAT SIDE TOWARD INFEED). Make sure the blade is centered and supported on the arbor.

TROUBLESHOOTING GUIDE

WARNING

DISCONNECT AND LOCK OUT THE MACHINE FROM THE POWER SUPPLY BEFORE SERVICING.

WARNING

TROUBLESHOOTING OF ELECTRICAL EQUIPMENT MUST BE PERFORMED BY QUALIFIED PERSONNEL ONLY.

Software on the 2003 is continually performing diagnostic checks on itself. The first diagnostic check occurs when the machine is first turned on.

STARTUP

1. The pusher returns until the "Home" proximity sensor is reached.
2. The pusher advances until it reaches the "End Travel" proximity sensor.
3. The pusher returns to the home position.

ERROR CODE DISPLAY

Other checks are made each time a loaf of bread is sliced. The LED display will show a code of Ec to Ec05 after a switch, sensor, or mechanical failure.

Ec01 - Severe Travel Error

- The pusher is jammed. Remove any obstruction. May also be caused by bent or dirty pins on the pusher which can restrict their movement in the pusher block.
- The proximity flag mounted on top of the pusher is too far away from the "End Travel" proximity switch.
- The "Pusher Bracket" track is filled near the pin end with a crumb buildup which is preventing the pusher from reaching the "Home" proximity sensor.
- Either the "End Travel" or the "Home" proximity sensor is malfunctioning. Check the sensors. See Diagnostic Mode section - Test #1 (page 2003S20005-6)
- Pusher motor/drive has malfunctioned. Check for failed stepper motor, loose set screws, or a broken or loose pusher drive belt.

ERROR CODE DISPLAY- Continued

Ec03- Product Detect Scanner Error

- The “Product Detect” scanner sensor has failed.

Ec04- Home Proximity Switch Error

- The pusher is not being allowed to return far enough to contact the “Home” proximity switch. Check for bread or crumb built up behind the pusher or between the pusher pin plate and the pusher block.
- The proximity flag mounted on top of the pusher is too far away from the “Home” proximity switch.
- The “Home” proximity sensor is malfunctioning. To check the sensor See Diagnostic Mode section - Test #1 (page 2003S20005-6).

Ec05- Clutch Time-out

- Check the circuit breaker, “1CB” located on the lower right hand rear corner of the machine, below the electrical panel cover and reset if required.
- Wrong size extension cord is being used, (too small of wire gage for length required), or, machine is on a non-dedicated circuit.
- The proximity flag mounted beneath the “Blade Arm” is too far away from the “Knife Up” proximity switch.
- The “Knife Up” proximity sensor is malfunctioning. See Diagnostic Mode section Test #2 (page 2003S20005-6).
- The “Blade Arm” has not returned to the full up, or home position. Check to see if you have power at the clutch drive gearmotor.

Ec- Auto Resetting travel error

- Clean the pusher pins and infeed tables, sticky product build-up are preventing free travel of the pusher.
- The setscrew securing the drive pulley on the stepper motor has become loose.
- See Ec01 solutions.

SOLVING OTHER PROBLEMS

Slice Thicknesses Are Not Equal.

- The bread is not being pressed completely onto the pins of the pusher block allowing the loaf to move on the pins between cuts.
- Bread is getting caught in the gap between the infeed and outfeed tables preventing free movement of the product. Re-adjust the outfeed table for minimum gap, while still allowing free movement of the slicer blade. Do **NOT** adjust the infeed table.
- The slicer blade is loose. Check the blade mounting screw.

Thickness Of The Slices Are Equal But They Are Not True to The Slice Setting

- The circuit board may be malfunctioning. You can check for proper size selection by observing the "Slice Selection Truth Table Inputs" on the circuit board. Remove the rear access panel and watch to see which LED's are lit relative to the front control panel slice selection. Refer to Figure #1 to see which LED's should be lit for each of the selections.

		SLICE SELECTION							
		1	2	3	4	5	6	7	8
YELLOW LED	08							ON	ON
	07			ON	ON	ON	ON		
	06	ON	ON			ON	ON		
	05		ON		ON		ON		ON

Figure 1

Slices Are Being Pulled Up Or Pushed Down Through The Gap Between The Tables.

- A heavy build-up on the blade from slicing warm bread or sticky fruit breads can cause this type of product damage or malfunction.
- The gap between the tables is too large. Re-adjust the outfeed table to a minimum gap setting which still allows for free movement of the knife between them while still allowing comfortable clearance for the spinning knife.
- The fingers on the hold-down could be bent too far away from the blade so that they cannot maintain control over the slices or crusts and they are pulled between the blade and hold-down.

SOLVING OTHER PROBLEMS- Continued

The Blade Is Crushing The Bread.

- The bread may be too warm for slicing.
- A heavy build-up on the blade from slicing warm bread or sticky fruit breads can cause this type of product damage or malfunction.
- The slicer drive motor may not be running, (the slicer knife will not be rotating). The motor is protected by a motor starter, located behind the rear access panel, which may need to be reset.
- The Knife has become extremely dull and needs to be replaced.

Slicing Begins Too Soon, The Knife Takes Several Strokes Before Product Is beneath The Knife.

- The reflector on the inside of the Knife Cover is dirty.
- The reflector on the inside of the Knife Cover is missing.
- The "Product Detect" scanner has failed.

The "Door Open" Light Is Always On.

- Any of the three door proximity switches could cause this. Check each by placing a metallic object in front of each switch.

One Of The Doors Can Be Opened Without The "Door Open" Light Coming On.

- Have an electrician check each of the three door proximity switches for proper operation.

SOLVING OTHER PROBLEMS- Continued

Nothing Happens When The Machine Is Turned On.

- Check to see if the machine is plugged in.
- Check to see if there is power at the outlet.
- Check to see if any of the circuit breakers have tripped. They are located near the lower, right hand, rear corner of the machine.
- Verify that the On/Off power switch has not malfunctioned.
- Inspect the wiring harness where it connects to the push-button panel to see if it has been disconnected. Should this happen the LED's on the control panel will still be lit. They can be viewed by removing the access panel on the rear of the machine.

The Knife Vibrates Excessively.

- Loose or mis-aligned knife or clutch drive belt'(s). Align or re-tighten as necessary..

The Machine Makes A Loud Thumping Sound Before Making The First Slice.

- Check for a loose blade drive V-belt, or clutch drive belt.

DIAGNOSTIC MODE

Diagnostic mode gives you the ability to trouble shoot the Vari-Slicer. Diagnostic mode is a series of manually operated independent tests which can be entered as follows.

- With the power OFF, depress and hold the START and STOP buttons.
- Turn the power ON while the above buttons are depressed.
- Hold START and STOP buttons until the slice buttons begin to flash on and off.
- Release all buttons and follow the next step quickly.
- Within three seconds, while lights are still flashing, press and release the hidden button located to the left of the #1 button, you are now in Diagnostic Mode.

Select the specific tests using the numbered buttons. The START button must be pressed to initiate a particular test and should be pressed each time a new selection is made.

Turn the machine OFF for several seconds to reset it for normal operation.

TEST 1: Jog Mode Test

The pusher can be moved to the left by pressing the **START** button or to the right by pressing the **STOP** button. If the “End Travel” or “Home” proximity sensor is made, the motor will stop immediately. This will indicate the proximity sensor is operating correctly. releasing the START or STOP button will allow the motor to be restarted.

TEST 2: Arm Test - (DOORS MUST BE CLOSED)

The gearmotor can be energized by pressing and holding the START button for three seconds. Continuing to hold the Start button for an additional three seconds will engage the arm clutch making the arm move down and up through a cycle. As long as the Start button is depressed the arm will continue to cycle every three seconds. During each of these cycles the input LED #13 should go off and on once. If the LED remains either off or on then the “Knife Up” sensor must be adjusted so that the LED in on only when the arm is in the up position.

DIAGNOSTIC MODE- Continued

TEST 3: Blade Motor Test- (DOORS MUST BE CLOSED)

The blade motor can be energized by pressing and holding the START button for three seconds. The motor can be stopped by pressing the STOP button.

TEST 4: Product Detect Scanner Test - (DOORS MAY BE OPEN)

Press the START button. If the "Door Open" light is ON it will indicate that the scanner is detecting an object. If the light is OFF it is indicating the scanner is not finding any object in front of it.

TEST 6: Door Test

When the "Door Open" light is on it is indicating that one of the following three doors or covers are open: Knife Cover, Infeed Cover or Outfeed Cover.

TEST 7: "SLOW" Jog Mode Test

This test is similar to "Test 2" except the pusher moves slower.

TEST 8: Front Panel Test

Press buttons to light the corresponding LED found on the front panel itself. This test will also automatically display numbers in the numeric display area.

RETURNED PARTS POLICY

This policy applies to all parts returned to the factory whether for warrantied credit, replacement, repair or re-stocking.

OLIVER PRODUCTS COMPANY requires that you obtain a Return Material Authorization (RMA) number before returning parts. All parts are to be returned prepaid and marked; "ATTENTION REPAIR PARTS MANAGER". Following this procedure will result in prompt handling of your returned parts with an "RMA" number. This number should appear on the shipping label as well as inside the shipping container.

To obtain an "RMA" number, contact the Repair Parts Department toll free -- 800/253-3893, Ext. 148 or Ext. 150.

Parts returned for re-stocking are subject to a RE-STOCKING CHARGE.

Thank you for your cooperation,

Repair Parts Manager
Oliver Products Company

WARRANTY

Varislicer™ Model 2003

Product Suitability

This product is intended for the slicing of bread and bread related products only. The specific suitability for slicing certain bread types is to be determined at the time of sale in conjunction with an authorized Oliver Products Company representative.

Parts

Oliver Products Company warrants that if any part of the equipment (other than a part not manufactured by Oliver) proves to be defective (as defined below) **within 3 years after shipment**, and if Buyer returns the defective part to Oliver Products Company within one year, Freight Prepaid Oliver Products Company's plant in Grand Rapids, MI, then Oliver Products Company shall, at Oliver Product Company's option, either repair or replace the defective part, at Oliver Products Company's expense.

Labor

Oliver Products Company further warrants that equipment properly installed, maintained, and cleaned in accordance with our special instructions, which proves to be defective in material or workmanship under normal use **within 2 years from installation or actual shipment date**, whichever ever comes first, will be repaired by Oliver Products Company or an Oliver Products Company Authorized Service Dealer, in accordance with Oliver Products Company's published Service Schedule.

For purposes of this warranty, a defective part or defective equipment is a part or equipment which is found by Oliver Products Company to have been defective in materials or workmanship, if the defect materially impairs the value of the equipment to Buyer. Oliver Products Company has no obligation as to parts or components not manufactured by Oliver Products Company, but Oliver Products Company assigns to Buyer any warranties made to Oliver Products Company by the manufacturer thereof.

This warranty **does not** apply to:

1. Damage caused by lack of cleaning, shipping, accident, misuse, or acts of God.
2. Damage resulting from improper installation or alteration.
3. Equipment not cleaned daily, misused, abused, altered, not maintained on a regular basis, operated carelessly, or used in abnormal conditions.
4. Equipment used in conjunction with products of other manufacturers unless such use is approved by Oliver Products Company in writing.
5. Normal wear parts including but not limited to: blades, belts, brakes, clutches.
6. Periodic maintenance of equipment and other adjustments required due to installation, set-up, or normal wear.
7. Losses or damage resulting from malfunction.

THIS WARRANTY IS NOT EFFECTIVE UNLESS THE INSTALLATION/WARRANTY REGISTRATION HAS BEEN COMPLETED, SIGNED, AND RETURNED TO OLIVER PRODUCTS COMPANY WITHIN 15 DAYS FROM DATE OF INSTALLATION.

The foregoing warranty is in lieu of all other warranties expressed or implied AND OLIVER PRODUCTS COMPANY MAKES NO WARRANTY OF MERCHANTABILITY OR FITNESS FOR PURPOSE REGARDING THE EQUIPMENT COVERED BY THIS WARRANTY. Oliver Products Company neither assumes nor authorizes any person to assume for it any other obligations or liability in connection with said equipment. OLIVER PRODUCTS COMPANY SHALL NOT BE LIABLE FOR LOSS OF TIME, INCONVENIENCE, COMMERCIAL LOSS, INCIDENTAL OR CONSEQUENTIAL DAMAGES.
