

Thank you for purchasing Oliver's Speedseal® Meal Packaging System. Be certain to review with your staff the proper use and care of the equipment.

For meal distribution via delivery bags, it is recommended trays with compartments are alternately stacked in the bags. The use of 24-point chipboard or similar dividers between layers of trays in large delivery bags/coolers is also recommended.

To ensure a smooth transition with your clients, it is recommended a communication be sent advising of the new packaging and sharing general food safety guidelines and meal reheating instructions.

General food safety guidelines

- Refrigerate cold meals immediately
- Consume hot meals immediately or place in refrigeration

Reheating meals

Hot meal:

- Peel back lid to vent or slit film in each compartment
- Re-heat meal in microwave 2 - 3 minutes maximum on high
- Re-heat meal in a conventional oven
 - Preheat oven to 350°F
 - Place meal on a baking sheet pan; reheat in the oven for 10 minutes maximum

Frozen meal:

- Peel back lid to vent or slit film in each compartment
- Heat frozen meals in microwave for 3 - 5 minutes maximum
- Heat frozen meal in a conventional oven
 - Preheat oven to 350°F
 - Place meal on a baking sheet pan and reheat in the oven for 30 minutes maximum

NOTE: Do not use toaster ovens to reheat under any circumstances.
